

PIYUSH KAPOOR

Java Lead | Spring Boot Microservices | Banking Platforms | API Architecture

Riyadh, Saudi Arabia | +91 8284824898 | +966 567113534 | piyushkapoor786@gmail.com | linkedin.com/in/piyush-kapoor-27839117

PROFESSIONAL SUMMARY

Hands-on Java Lead with 12+ years of experience designing and delivering banking, payments, insurance, and enterprise platforms. Strong in Java, Spring Boot, microservices, REST API architecture, secure integrations, production support, engineering governance, and team leadership across platforms spanning 10-15 services and critical business journeys.

WORK HISTORY

Innovations Group KSA / Country Arab House

Technical Lead | Riyadh, Saudi Arabia | Apr 2023 - Present

- Lead backend solution architecture and delivery for 12 Spring Boot microservices, REST APIs, React Native clients, and React.js clients across banking and payments journeys.
- Own production stability and secure integration design across 15 internal and external service integrations.
- Lead cross-functional delivery across backend, mobile, web, QA, and product teams for banking and payments platforms.
- Manage 8 engineers while driving HLD, LLD, sprint planning, code reviews, release governance, engineering standards, and production support.
- Own service boundaries, API contracts, integration patterns, secure workflows, release readiness, incident response, and stakeholder alignment across 3 parallel workstreams.

AU Bank

Technical Lead | Jaipur, India | Jan 2023 - Mar 2023

- Led backend architecture and implementation across Spring Boot microservices, shared REST APIs, and React.js/React Native channels.
- Led a time-bound merchant banking platform engagement covering onboarding, account servicing, lending, and operational workflows.
- Directed 6 engineers across frontend, mobile, and backend workstreams while defining architecture decisions, integration patterns, API contracts, and release priorities.
- Delivered 4 high-priority milestones through hands-on technical guidance, business logic implementation, API troubleshooting, and release coordination.

Xebia IT Architects

Technical Lead | Gurugram, India | Jul 2020 - Dec 2022

- Led Java/Spring Boot solution delivery across fintech and enterprise platforms with reusable backend design patterns.
- Led fintech and enterprise delivery for YES Bank, Ivi Bank, and related platforms across distributed engineering teams.
- Owned architecture for 10 services and integrations, reusable design patterns, API contracts, delivery models, and maintainability improvements.
- Mentored 12 engineers and coordinated with client stakeholders, QA, backend, mobile, web, and product teams to deliver 6 workstreams and release milestones.

Esolutions

Senior Software Engineer | Gurugram, India | Jun 2018 - Jun 2020

- Built enterprise applications using Java backend services, REST APIs, React.js, Angular, and AEM-based experiences.
- Delivered reusable frontend/backend modules, API integration, scenario-driven digital flows, and production-ready application features.

Ameba Software Solutions

Software Engineer | Chandigarh, India | Apr 2016 - Jun 2018

- Developed full-stack web application modules using Java, JavaScript, SQL, and REST API integrations for education and enterprise clients.
- Built reusable components, widget-based features, enhancements, bug fixes, and client-specific workflows.

PMASS INDIA

Software Developer | Ludhiana, India | Jan 2014 - Apr 2016

- Developed business application modules using Java, SQL, JavaScript, HTML, and CSS for internal business workflows.
- Supported feature delivery, issue resolution, and collaborative development practices.

SKILLS

- **Java Backend:** Java, Spring Boot, Spring MVC, Spring WebFlux, Spring Security, Spring Cloud, Spring Cloud Config, Eureka, Feign Client, Resilience4j
- **Microservices and APIs:** REST APIs, API Contracts, Microservices Architecture, Service Orchestration, Integration Architecture, API Gateway, Kong, NGINX
- **Data and Messaging:** JPA, Hibernate, SQL, MySQL, PostgreSQL, MongoDB, Redis, Kafka, RabbitMQ
- **Cloud and DevOps:** Maven, Git, GitHub, GitHub Actions, Jenkins, Docker, CI/CD, AWS, Azure, GCP, Firebase
- **Engineering Process:** HLD, LLD, Agile/Scrum, Sprint Planning, JIRA, Confluence, Code Reviews, Release Management, Production Support
- **Design and Quality:** System Design, Object-Oriented Design, SOLID Principles, Design Patterns, Secure Coding, Performance Optimization, Troubleshooting

EDUCATION

Bachelor of Technology in Information Technology

Guru Nanak Dev Engineering College, Ludhiana

SELECTED PROJECTS

SAIB Travel Application

SAIB Travel is a customer-facing travel banking app from The Saudi Investment Bank, supporting online account opening, digital Travel Card issuance, spending in 100+ foreign currencies, transfers, e-statements, digital wallets, rewards, and additional family cards. The solution was built using JavaScript, Node.js, Express.js, MongoDB, microservices, REST APIs, React Native integration. In this project, I owned backend/API thinking for service contracts, integration flows, data handling, troubleshooting, and secure transaction-oriented workflows. Helped deliver a customer-facing travel banking experience closely aligned with SAIB's public Travel App proposition for secure, flexible, multi-currency mobile banking.

IRIS by YES BANK - Mobile App

IRIS by YES BANK is YES BANK's mobile banking app for 24x7 digital banking, payments, bill pay, money transfers, digital savings account journeys, credit card and loan-related services, biometric login, and secure customer banking. The solution was built using JavaScript, Node.js, Express.js, MySQL, microservices, REST APIs, React Native integration. In this project, I provided backend/API solution support for critical services, integration issues, data flow design, reliability improvements, and banking workflow logic. Enabled a cross-platform mobile banking experience that aligns with IRIS's public positioning as a secure, feature-rich digital banking app for customer financial journeys.

AU Merchant / AU 0101 Business Platform

AU 0101 Business is AU Small Finance Bank's business banking app for current account and business banking users, supporting merchant QR self-onboarding, QR collections, real-time settlement, account servicing, loans, cards, GST payments, investments, and business transaction management. The solution was built using JavaScript, Node.js, Express.js, MySQL, microservices, REST APIs, React Native, React.js. In this project, I led backend/API design decisions, service integration, business rule implementation, critical functionality solutions, and delivery governance. Delivered merchant and business banking capabilities aligned with AU's public AU 0101 Business and merchant-payment-service positioning for digital-first business banking.

YES API HUB

YES API HUB aligns with YES BANK's public API Developer Portal, where partners can explore API products and construct application experiences using the bank's API ecosystem. The solution was built using React.js, Node.js, Express.js, MongoDB, REST APIs, B2B workflow integration. In this project, I supported backend/API solution design, service contracts, critical functionality decisions, integration flow, and banking workflow reliability. Digitized partner-facing API banking journeys in a way that aligns with YES BANK's public API portal positioning for API products and partner application enablement.

Citi Innovative Payment Services

Citi payment services support business and institutional payment flows, including payments, clearing, receivables, corporate payment operations, and relationship-driven banking services for business customers. The solution was built using Node.js, Express.js, Socket.IO, MySQL, Angular, payment workflow services. In this project, I contributed as a senior developer on backend payment flows, transaction coordination, service behavior, data handling, and issue resolution. Supported a corporate payments solution aligned with Citi's broader public payments and treasury-services positioning around efficient business payment operations.

NCAP

NCAP is an NIIT course/content authoring and documentation platform, publicly reflected through NCAP course-preview and user-guide material for creating, previewing, and managing structured educational content. The solution was built using JavaScript, Node.js, Express.js, MongoDB, REST APIs, widget-based architecture. In this project, I handled architecture setup, backend service coordination, API behavior, reusable feature support, and team guidance for course-authoring workflows. Delivered a configurable education-content platform aligned with the available NCAP guide material for course creation, previewing, documentation, and reusable learning workflows.
